

Briquettes

The Briquettes (B) are made from the pure beech wood sawdust that comes from the production of the processed Panels. They are made under high pressure, consists no binder material, and as very efficient burners, they give high calorific value, leaving a low amount of biodegradable ash residue. They can be used for solid fuel burners, heating systems and other electricity using alternative power systems.

The cut of our Briquette is characterized with high structural homogeneity and well density. The surface is smooth with brown color, without any deformities. They are tested according to MKS D.B9.021/87, and satisfy all the requirements and standards for approving the functional value of the Briquettes.

Technical Specification:

Weight of one block:

0.85 kg

Form:

Cylindrical d = 82mm / 120mm

Volume:

876,15 kg/m³

Humidity:

6,70%

Low Caloric (heat) value:
16.805,42 kJ/kg.

Component of dust:

0.32%

Classification standard:

Extra class

Packaging:
Sealed 10-12kg polythene bags
