

Firewood

The Firewood (FW), as a main recourse for heating the homes, is widely used in Macedonia, not only because it is cheaper than the other convenience fuels such as gas, oil or electricity, but also because it is environmentally better fuel.

We produce Firewood in different shapes and sizes, depending on the needs of our customers. Mainly, our Firewood is made from beech wood, and after carefully cross-cut and split in the required size, it is thermally treated and dried to residual moisture of approximately 25%. We provide our customers, quality Firewood from the domestic forests, dry clean and ready for immediate use.

Macedonia is the main market, consumer of this product. 100% of the production capacities are used for domestic use only.
